Duke | Security Advisory Notification System
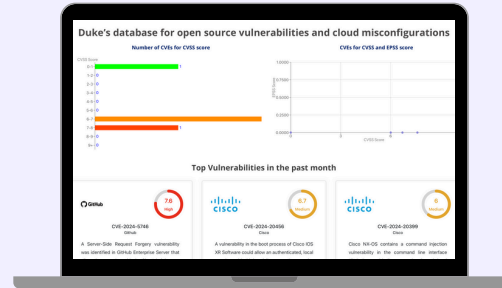

OVERVIEW

Our project aggregates and presents **advisory** and **vendor data** from Duke-utilized software in a unified, filterable format based on **criticality** and **relevancy**.

HELPFUL DEFINITIONS

CVE (Common Vulnerabilities and Exposure) = publicly known cybersecurity vulnerabilities and flaws.
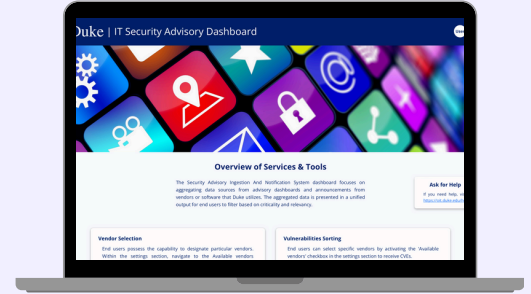

- Select vendors you want to receive **notifications** from.

- **Sort** vulnerabilities and categorize CVEs.

- Delve into detailed CVE **summaries** for comprehensive insights.

- Receive **notifications** about security updates.

DASHBOARD

Log in to view the most recent vulnerability **updates** for selected **vendors.**

SERVICES & TOOLS

Visit the about page for **instructions** and an **overview** of the main features of the page.

FEATURES

 View CVE data

 Receive security Alerts

 Shibboleth Authentication

Click on a CVE to view the details.

ADVANTAGES AND VALUE

- **PERSONALIZATION** users can personalize vendors and notification frequency.
- **USABILITY** users are able to select specific CVEs they need details from.
